

Biodiversity Policy

Where referenced as Frank Roberts & Sons, this policy refers to Roberts Northwich, Roberts Ilkeston and Roberts Winsford.

As a responsible corporate food manufacturer, Frank Roberts & Sons recognises that through its manufacturing processes, there are direct and indirect impacts on biodiversity, on both a national and international level. We are committed to protecting biodiversity on site and throughout our supply chains, thus making positive changes for people and the planet – today and for years to come.

We aim to improve biodiversity by:

- Seeking to create, maintain and enhance habitats where possible.
- Minimise the impact on biodiversity from development works and comply with Biodiversity Net Gain legislation.
- Providing information to staff about the climate and ecological crisis and measures they can take to help mitigate the major loss of biodiversity and ecosystems.
- Complying with all biodiversity compliance obligations.
- Completing relevant due diligence in line with EUDR and Environment Act Legislation to ensure transparency of high deforestation risk commodity supply chains such as palm oil and soy.
